U.S. citizen · Prior DoD CAC holder (2020–2024, unclassified systems), eligible for reinvestigation · CompTIA Security+ 2023–2026, prepared to recertify on hire

SUMMARY

Senior DevOps engineer with 15+ years in software — five of them building and securing AWS-hosted systems for federal government and enterprise clients, largely on AWS GovCloud: GitOps CI/CD on GitLab and ArgoCD, Kubernetes on Docker, and security remediation at scale (1,000+ Fortify findings resolved), with STIG compliance training. Open to government DevOps roles where security and end-to-end ownership matter.

EXPERIENCE

Founder & Independent Software Engineer · Self-directed

Feb 2025 – Present · Paso Robles, CA

- Built bighammergarage.com from scratch for a YouTube studio's merch store — roughly two dozen sales to date on \$12/year hosting, with no Shopify subscription to manage.
- Shipped GrowGo's working prototype — a farmers-market marketplace on Flutter + Cloudflare Workers — after pitching it for VC funding in 2025.
- Took Widda (widda.club), a creator-monetization tool, through Chrome Web Store submission with a small launch team.

DevOps Engineer · UNCOMN LLC

Jan 2020 – Nov 2024 · Remote

Five years building and securing AWS-hosted systems — largely on AWS GovCloud — for federal government and enterprise clients. Owned Fortify/SAST security remediation and CI/CD across successive production contracts; departed when the contract concluded.

- Resolved 1,000+ Fortify-flagged (SAST) vulnerabilities, owning security remediation across five years of federal contracts — including bi-weekly Fortify scans briefed through a legacy-modernization effort.
- Built GitOps CI/CD on GitLab + ArgoCD on AWS GovCloud, retiring a Jenkins-only pipeline — recovered ~1 developer-day per sprint and halved pipeline-environment issues.
- Deployed the AWS Lambda + API Gateway layer behind 50+ automated jobs on Docker/Kubernetes — supporting systems used across US military bases, including every US installation in South Korea.
- Ramped from junior hire to owning contract security work within six months — closed sprint work at ~6x peer rate (by Jira points) on ICODES, a 30–40-developer ship and aircraft load-planning platform.
- Performed code and security reviews, coordinated agile delivery with client stakeholders, and completed STIG (Security Technical Implementation Guide) compliance training.

Software Engineer · Draftboard

Mar 2018 – Sep 2019 · Remote

- Drove a stalled iOS sports-drafting product to launch readiness; the company was acquired by DraftKings in 2019.

Software Engineer · Cumulus Data Storage Solutions

Nov 2015 – Jan 2018 · Remote

- Charted point-of-sale data BevMo hadn't been able to visualize — the holiday stocking decisions it guided saved the client a few million dollars in one season.

Software Engineer · Neurotopia (SenseLabs LLC)

Jun 2010 – Nov 2015 · San Luis Obispo, CA

- Owned the Ruby backend for the Neuro Headgear EEG product for five years; built iPad training games in Unity and Swift.

SKILLS

Cloud & Infrastructure: AWS (GovCloud, Lambda, API Gateway), Docker, Kubernetes, Cloudflare

CI/CD & Delivery: GitLab CI/CD, ArgoCD (GitOps), Agile / Scrum

Security & Compliance: Fortify (SAST) remediation, STIG compliance (trained), security review, incident response

Languages: Python, Java, JavaScript, TypeScript, Go, SQL, Ruby, Swift, Rust, PHP

CERTIFICATIONS

CompTIA Security+ — held Jul 2023 – Jul 2026 (lapsed); prepared to recertify on hire. Credential ID COMP001022308155.

EDUCATION

General college coursework, Cuesta College (San Luis Obispo, CA) · High School Diploma
